Water Quality Project

**Watershed Protection Plan Update
and Stakeholder Feedback**

David Waidler
Watershed Coordinator
Texas AgriLife Research

North Central Texas
Water Quality Project

Nine Elements of Watershed Protection Plans

1. Identify the sources and causes of pollution *Complete*
2. Estimate the necessary load reductions *Complete*
3. Describe Point Source and Non-Point source management measures *In Progress*
4. Assess the technical and financial assistance needed *In Progress*
5. Design an informational/ educational component *Complete*
6. Develop a schedule of implementation *In Progress*
7. Set interim measurable milestones for progress. *Complete*
8. Establish criteria to determine load reductions *Complete*
9. Create a monitoring component *Complete*

North Central Texas
Water Quality Project

Cedar Creek Watershed Protection Plan

1. Is the watershed assessment accurate?
2. Are the computer modeling and water quality testing methods explained clearly?
3. Is the language acceptable to a wide audience?
4. Can the Plan be used to persuade funding sources and influence policy makers?
5. Does the Plan adequately express the urgency of water quality concerns?
6. What would you change?

Water Quality Project

Work Group Sessions

- Review portion of watershed plan
- Does this represent the decisions and work of your group?
- Are the descriptions of BMPs accurate?
- Is the management strategy clear?
- What would you change?
